

General notes

- i) All details are correct at time of going to press.
- ii) London Capital Group Ltd reserves the right to alter the contract specifications at anytime and to widen spreads in times of excessive market volatility.
- iii) All times stated are UK times.

Maximum Computer Generated Stop Level (Max CGSL)

The Max CGSL is the Maximum Computer Generated Stop Level. This is the maximum figure used to automatically allocate a stop loss on newly opened positions. The trading system will assign a stop level based on 80% of the CGSL if there are sufficient funds on the account. For instance, if you have £2000 in your account and you trade the Daily FTSE at £10 per point, the system will automatically allocate a stop loss of 120 points (because the Max CGSL for the Daily FTSE is 150 and 80% of 150 is 120) and you would also have £500 remaining as available funds on your account. Alternatively, if there are insufficient funds to cover the Max CGSL, the system will allocate the stop level based upon 80% of the available funds (see following details). The Max CGSL varies depending on the product.

Minimum Initial Margin Requirement (Min IMR)

The Min IMR is the Minimum Initial Margin Requirement. You can calculate the minimum level of funds required to open a new position by multiplying the Min IMR by your stake. For example, the current Min IMR for the UK 100 Index Future is 30 – the stop will be set to 80% of Min IMR which is 24 points in this example. Therefore, if you wished to trade £5 per point, you would need a minimum of £150 available funds on your account ($30 \times 5 = 150$). The Min IMR varies depending on the product.

LCG's Stop Loss Policy

LCG automatically creates a Stop Order for every trade opened. This Stop is based EITHER on 80% of the CGSL OR on 80% of the available funds on your account. You may amend your Stop to whatever level you desire, assuming you have sufficient unencumbered funds available in the account, and that your required stop is outside the minimum stop order distance allowable for that market. Although this Stop does go some way towards limiting your risk on your open trades you must be aware that all orders including Stops are subject to market gaps unless you specified for your Stop to be guaranteed (see below and clause 7 in the Terms and Conditions).

Guaranteed Stop Orders

LCG now offer Guaranteed Stop Orders. With Guaranteed Stop Orders you can trade safe in the knowledge that, should a market gap through your stop level, you will not suffer any extra losses from the slippage and you will be stopped out at the level you requested. As Guaranteed Stop Orders are a form of insurance against market gaps, they come at a small extra cost. Firstly, there's a premium you have to pay for selecting your mandatory Stop to be guaranteed and secondly, it needs to be placed further away from your entry level than if it was a non-guaranteed Stop. When instructing us to attach a Guaranteed Stop Order to an existing open position, an opening trade, or a new order, we will charge a premium by executing a cash debit to your account. Opting for your Stop to be guaranteed will also recalculate the minimum distance away from your opening trade.

Further details of the premiums and minimum distances can be found below.

LCG will not quote any markets outside of its opening hours which are generally Sunday 22:00 to Friday 21:15, UK time.

Limited Risk Accounts

London Capital Group offer Limited Risk accounts. A Limited Risk account helps minimise the risks of trading by associating a Guaranteed Stop Order with all your opening positions. Depending on your level of experience and financial situation you may be steered towards this account when you apply. Once you have some experience you can always contact Customer Support to request to swap your account to a standard account which means you will have the option of placing Guaranteed Stop Orders if you wish but these will not be mandatory.

As mandatory Guaranteed Stop Orders are essentially a form of insurance against market gaps, they come at a small cost. This premium will be debited from your account when you place a trade. You should also note that by opting for a Limited Risk Account your Stop will need to be placed further away from your entry level than if you selected a standard account where Guaranteed Stop Orders are not mandatory.

¹ The minimum distance is the Guaranteed Stop Order charge plus the spread for the market

Notes on individual shares

- i) The quote spread will be based on the natural market bid offer. The price is adjusted for dividends (which are not paid on spread bets), funding costs and London Capital Group' spread.
- ii) On expiry of equity bets of less than £100 a penny/cent movement and/or of less than £30,000 total underlying contract value (i.e. a £100 bet on £1.00 share would have a contract value of £10,000), whichever is the least, the settlement price will be based on the closing bid or offer price of the contract plus or minus half the London Capital Group' spread on that contract depending on the client position. For example, if the client has an Up Bet on expiry, the settlement price will be the bid of the share in the market at expiry time minus half the spread. If the client has a Down Bet on expiry, the settlement price will be the offer of the share in the market at expiry plus half the spread.
- iii) On expiry of equity bets of greater than £100 per penny/cent movement and/or of total contract value greater than £30,000, London Capital Group Ltd shall settle the bet at either the average bid/offer spread of the underlying share in the last hour of trading of the last trading day plus or minus the relevant London Capital Group' spread, or at the price achieved by London Capital Group Ltd in removing its hedge on the relevant bet during the course of the final business day of the relevant expiry date plus or minus the relevant London Capital Group' spread, or at the normal expiry terms as stated in the above section ii)

Rollover of Futures Contracts

Rollover terms on all markets are available with LCG. To avail yourself of any rollover concessions you must indicate to LCG 45 minutes before the expiry of the relevant contract that you wish to roll. LCG will rollover futures contracts as follows:

- For equities, LCG will expire the existing trade spread free (at just the underlying market price) and offer the subsequent quarter at half of the spread.
- For all other contracts, LCG will expire the trade at our mid point and offer the subsequent quarter at the current LCG quote.

Notes

- i) LCG closes the existing trade on rollover of futures contracts and subsequently opens a new trade on the next month/quarter.
- ii) Any profits or losses incurred are realised on rollover of futures contracts

Rolling Daily contracts may incur a debit or credit for each day that they are held overnight. If you are long of a market, this equates to real market cash exposure and so interest may be charged on this cash value for each day that the position is held open overnight. If you are short of a market, an interest return may be paid on these equivalent cash funds.

The overnight financing can be calculated as follows:

$$F = \frac{(p / u) \times s \times i}{b}$$

F = overnight financing

p = closing price

u = unit risk

s = stake

i = applicable interest rate (RFR + 2% for long bets or – 2% for short bets)

b = day basis (365)

Rolling Daily Contracts

Rolling Daily contracts may incur a debit or credit for each day that they are held overnight. If you hold an open position at 23:30 London time then any relevant overnight financing charges and dividend charges will be applied to this position. The actual charge can be applied at any time after 23:30. If you are long of a market, this equates to real market cash exposure and so interest may be charged on this cash value for each day that the position is held open overnight. If you are short of a market, an interest return may be paid on these equivalent cash funds.

Notes on Daily Rolling equity and index trades

- i) The Relevant Funding Rate (RFR) is generally equivalent to the base rate of the underlying currency of the country of the market concerned. Long rolling trades on shares / indices may be debited financing (RFR plus 2%). Short rolling trades on shares / indices may be credited financing (RFR minus 2%). For example, the RFR for a short rolling daily trade on Google would be based upon the base rate (Fed Funds Rate) of the USA minus 2% (e.g. 3.25% - 2% = 1.25%).
- ii) The unit risk is the smallest movement on the relevant contract.
- iii) Dividend adjustments are credited to long positions and debited from short positions held at the close of business on the day before the ex dividend date. If you are long, you may receive 80% of the dividend and if you are short you may be debited 100% of the dividend. Payment is credited / debited to your account on the ex-dividend date. Dividend adjustments may also apply to index positions.

Notes on Daily Rolling currency trades

- i) The Relevant Funding Rate (RFR) for Forex trades is generally equivalent to the base rate of the second currency minus the base rate of the first currency in a currency pair. For example, the first currency in the currency pair GBP/USD is sterling and the second is the US dollar. Therefore, the corresponding RFR for GBP/USD may be calculated as follows: 3.25% (USD) minus 4.50% (GBP) = a negative interest rate of minus 1.25% or – 0.0125%.
- ii) For Daily Rolling currency trades, the difference tradeween the interest rates of currencies may be a negative number. The rates used for the examples above are indicative and are not necessarily representative of correct rates.
